<http://www.gujinwei.org>

EDUCATION:

- 9/2005-5/2010 **Columbia University**
Ph.D. in Computer Science (Honor: PhD with Distinction)
- 9/2002-5/2005 **Tsinghua University**
M.S. in Automation (Honor: Outstanding Master's Thesis Award)
- 9/1998-5/2002 **Tsinghua University**
B.S. in Automation

EMPLOYMENT:

- | | | |
|-----------------|--|--|
| 03/2023-Present | Chinese University of Hong Kong | Associate Professor |
| 11/2018-03/2023 | SenseTime USA (aka SenseBrain) | R&D Executive Director |
| 11/2015-11/2018 | NVIDIA Research | Senior Research Scientist (Learning and Perception Research) |
| 11/2013-10/2015 | Futurewei Technologies (Huawei R&D, USA) | Senior Researcher in Media Lab (New Jersey Office) |
| 9/2010-6/2013 | Rochester Institute of Technology (RIT) | Assistant Professor of the Chester F. Carlson Center for Imaging Science |
| 9/2005-5/2010 | Columbia University | Graduate Research Assistant of the CAVE Laboratory in Computer Science |
| 5/2008-8/2008 | Adobe Research | Research Intern in the CTL Lab |
| 2003-2004 | Microsoft Research Asia (MSRA) | Research Intern in the Visual Computing Lab |

RESEARCH INTERESTS:

Computational Imaging; AI Sensor/Camera/ISP Chip; 3D Computer Vision;
Computational Photography

RESEARCH PRODUCT EXPERIENCE:

Sense Time USA (aka SenseBrain) 2018-present: Mobile Photography

Build and lead a R&D team of ~30 people in Silicon Valley, focusing on complete product solution for photo/video quality enhancement, which is computational photography and computational imaging on mobile phones, including super-resolution, AI denoising, HDR video, soft camera ISP, portrait enhancement, RGBW, RGBCMY, super night, super resolution, under display camera, etc. In 2020, we built the world first AI-sensor (RGBW, IMX866) with SONY. In 2021, we successfully built the world first 200M pixel sensors with all directional PDAF capability.
https://www.gsmarena.com/the_vivo_x80_series_will_introduce_a_new_sony_imx866_rgbw_sensor-news-54046.php In 2022, his team won Rank #1 for Super Resolution. The FaceSR product developed from his team has the largest market share for mobile phones.

NVIDIA 2017-2018: Co-Pilot SDK / Drive IX (AI-based ADAS Platform)

Lead the team for technology development and transfer to build the Co-Pilot SDK (AI for in-car monitoring), including head pose estimation, gaze estimation and tracking, hand gesture recognition, and lip reading. Demo in NVIDIA Keynote for CES 2017, Jan 2017
<https://techcrunch.com/2017/01/04/nvidia-builds-a-co-pilot-into-its-autonomous-drive-computer/> Our work on wide-baseline video stitching is also shipped into NVIDIA Drive IX SDK (<https://www.nvidia.com/en-us/self-driving-cars/drive-ix/>). I also led the team developing novel approaches for DNN-based inverse image rendering, video-based depth estimation, 3D plane estimation, polarization-based multiview stereo, etc.

NVIDIA 2015-2017: VirtualEye Project (multi-camera tracking + free-view video)

Key member in this Nvidia+DARPA collaboration, June 2016
<https://www.engadget.com/2016/06/24/darpas-virtual-eye-lets-soldiers-see-around-obstacles> We built a multi-camera tracking system to create free-view video experiences for telecommunication and telepresence. The entire system includes: multi-camera Co-SLAM, 3D reconstruction of background and foreground subjects, novel view synthesis, and real-time streaming for image-based rendering. I am in charge of the multi-camera Co-SLAM tracking and the system design, and I also ported the Co-SLAM system on NVIDIA Jetson TX2 for mobile devices, with lower power consumption.

Futurewei 2014-2015: V-Sports Project (multi-camera virtual reality system)

Team lead for prototyping a complete virtual reality system built with multiple cameras. The system includes: multi-camera 3D scene capture and post-processing (i.e., 3D alignment, background subtraction, etc.), multi-camera video stitching, real-time streaming, and augmented reality on mobile devices (Android).

RIT 2012-2013: Discriminative Illumination for Recycling (material classification)

Principal investigator for building a novel active lighting and imaging system for recycling scrap materials (e.g., aluminum, copper, plastics). I led the team to build a LED-based

multispectral dome (controlled with Arduino boards) as a prototype product and test with real samples from the institute of sustainability for scrap material recycling.

HONORS:

CVPR 2019 Best Paper Final List
CVPR 2018 Outstanding Reviewer
Ph.D. Degree with Distinction, Columbia University, 2010.
Ph.D. Service Award, Columbia University, 2009.
Principal Scholarship Award, Tsinghua University, 2005.
Outstanding M.S. Thesis Award, Tsinghua University, 2005.

¹ In computer vision, one of the leading journals is the IEEE Transactions on Pattern Analysis and Machine Intelligence (PAMI), Leading conferences are IEEE CVPR, ICCV and ECCV. Papers in these conferences are rigorously reviewed, with acceptance rates around 20%, and below 5% for oral presentations. In computer graphics, the SIGGRAPH conferences (SIGGRAPH & SIGGRAPH Asia) are the leading venue for publishing research in computer graphics, with acceptance rates ranging from 15%-20%. Since 2002, the proceedings have also been published as a special issue of the ACM Transactions on Graphics (TOG), the leading journal in graphics. The EuroGraphics Symposium on Rendering (EGSR) is the leading venue for rendering research (second only to the SIGGRAPH conference), and has a competitive acceptance rate of 25-35%. In computational photography, the leading conference is IEEE ICCP, with the acceptance rates around 20%.
